360° LiDAR for SLAM & Navigation

Scalable Structure

Single Board Computer
(Raspberry Pi)

Raspberry Pi Camera
for Perception

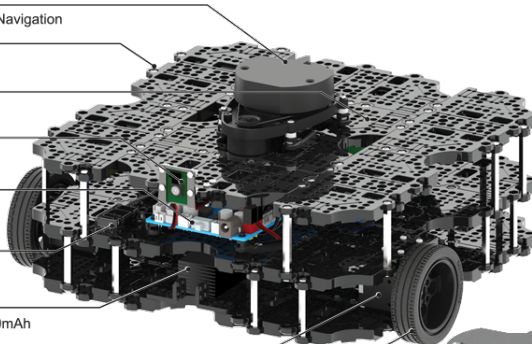

OpenCR
(32-bit ARM® Cortex®-M7)

Bluetooth Module
for Remote Controller

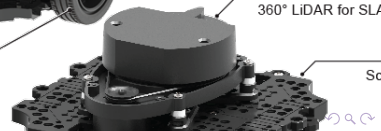

Li-Po Battery 11.1V 1,800mAh

DYNAMIXEL x 2 for Wheels

Sprocket Wheels for Tire and Caterpillar

360° LiDAR for SLA

Tutorial 5 - Turtlebot3

- ▶ **Overview:** Finally, you are going to install the Turtlebot3 simulator in ROS. This is a 3D robot simulator that uses Gazebo.
- ▶ **Assignment:** Complete the Tutorial 5 Turtlebot3 Simulator on ilearn. You must be able to drive your turtlebot3 around the virtual arena.
- ▶ **Deliverable:** Write a one to two paragraph summary of what you accomplished and what you struggled with the most. Include an image of the Gazebo window after you have driven the robot around with the keyboard.
- ▶ **Next Week:** After completion of Module 5, you are ready to learn about robot navigation. You will learn to use the simulated Turtlebot3 to make a map and navigate in the Gazebo simulator.
